The Problem

02

1

Slow

Writing test cases by hand takes hours for every single feature.

2

Inconsistent

Coverage depends on who writes the tests, so edge cases get missed.

3

Costly

Requirements change and test suites must be rewritten again and again.

Our Solution

Requirements in. Test cases out.

AITesterGen uses AI to turn user stories and requirements into structured, ready-to-run test cases in seconds.

Sample Output

04

Requirement: “As a user, I can log in with my email and password.”

ID	Scenario	Steps	Expected result	Priority
TC-01	Valid credentials	Enter valid email and password, click Login	User lands on the dashboard	High
TC-02	Wrong password	Enter valid email and a wrong password	Error shown, no login	High
TC-03	Empty fields	Click Login with both fields empty	Required-field messages appear	Medium
TC-04	Very long email (edge)	Enter an email over 255 characters	Input rejected with a clear message	Low

How It Works

05

1

Input

The tester pastes a requirement or user story.

→

2

Analyze

The AI model extracts features, rules and conditions.

→

3

Generate

Positive, negative and edge cases are created.

→

4

Review

The tester edits, approves and exports the suite.

Key Features

06

Plain-language input

Write requirements the way you normally do.

Full scenario coverage

Positive, negative and edge cases in one run.

Structured output

ID, steps, expected result and priority.

Fast generation

A full suite in seconds, not hours.

Review and edit

Testers stay in control of every case.

Export

Download as Excel or CSV for any test tool.

Tech Stack

FRONTEND

[React / HTML]

Interface for entering requirements and reviewing results.

BACKEND

[Python / Node.js]

API that handles requests, prompts and validation.

AI ENGINE

[LLM / model]

Generates test cases from structured prompts.

EXPORT

[Excel / CSV]

Saves approved test cases for the QA team.

Impact and Future Work

08

Impact

- Faster test design
- Consistent, wider coverage
- Fewer missed edge cases
- Easier onboarding for new testers

Future Work

- Generate Selenium / Playwright scripts
- Integrate with Jira and TestRail
- Support Arabic requirements
- Learn from tester feedback
